Multi-Level BOM Viewer Battle Card

For Microsoft Partners who sell Insight Works apps

Multi-Level BOM Viewer shows a production bill of materials in Microsoft Dynamics 365 Business Central as a multi-level table or tree diagram. Enter a target quantity to see component availability and shortages at every level, and correct BOM lines from the same page.

WHO TO CALL ON

Manufacturers on the Business Central Premium tier that build products from multi-level production BOMs.

Planners check and correct BOMs, and the diagram helps sales, operations, and service teams see how a product is built.

What changes when you add Multi-Level BOM Viewer to Business Central

	Business Central without Multi-Level BOM Viewer	Business Central with Multi-Level BOM Viewer
Deep structures	A component two or three levels down is easy to miss, and opening each subassembly to trace it takes time.	Every level appears in one expandable table, including lower-level BOMs with no item attached. Drill through from any line to its production BOM or item card.
Can we build it?	To answer whether the plant can build ten units, a planner checks each component separately. Shortages often surface after production starts.	Enter an output quantity, location, and date filter to calculate demand and availability for every component. Shortages show at every level of the hierarchy.
BOM corrections	Fixing a wrong quantity or unit of measure means leaving the analysis to find and edit the right BOM.	Edit Line changes the BOM line in place, even on a certified production BOM, and each change leaves an audit record.
Explaining structure	A long indented list is hard to read for sales, operations, and service teams who need to know how a product is built.	Diagram View draws the BOM as a tree with quantity, supply, demand, and availability on each node, top to bottom or left to right.

Common questions

Does it run on Business Central online?
Yes. Multi-Level BOM Viewer runs on Business Central online and on-premises.

What Business Central license is needed?
The Premium tier, the only tier that includes production BOMs. Users need a full user license.

Can certified BOMs be edited?
Yes. Edit Line changes the line in place even when the production BOM is certified, and each change leaves an audit record.

How is it licensed?
It is a subscription licensed per company. It is included in the Enhanced Planning Pack and also available on its own through Microsoft Marketplace.

What data does it need?
It reads production BOMs that already exist in Business Central. Results depend on the quantity, date filter, location, and demand settings in the page header.

Can the structure be shown as a picture?
Yes. Diagram View draws the BOM as a tree, and selecting a node opens that BOM line for editing.
